

National Integrated Drought Information System

Drought Early Warning for the Apalachicola-Chattahoochee-Flint River Basin

17 May 2016

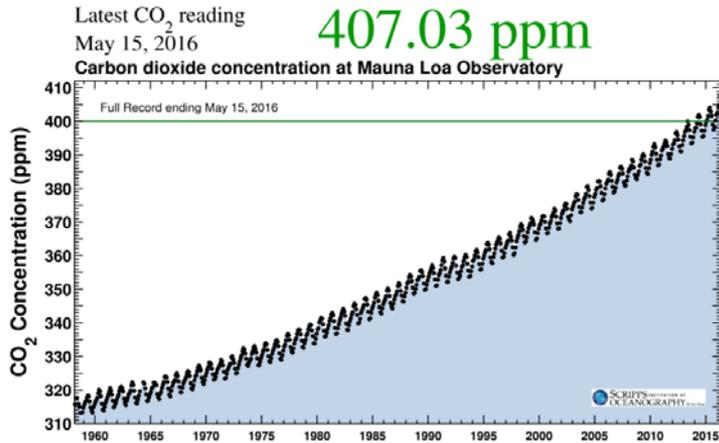

Outline

Welcome – Eric Reutebuch, AU Water Resources Center

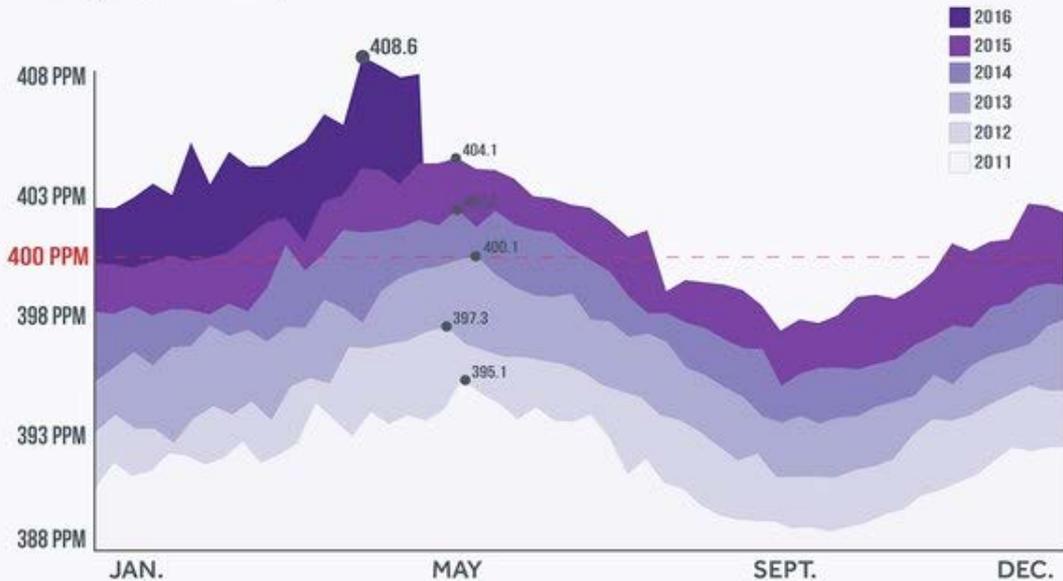

- Current drought status, seasonal forecasts and outlooks – David Zierden, Florida Climate Center, FSU
- Streamflows and groundwater – Tony Gotvald, USGS
- Streamflow forecasts – Jeff Dobur, SERFC
- Summary and Discussion

Global CO₂ Concentration

Climbing CO₂

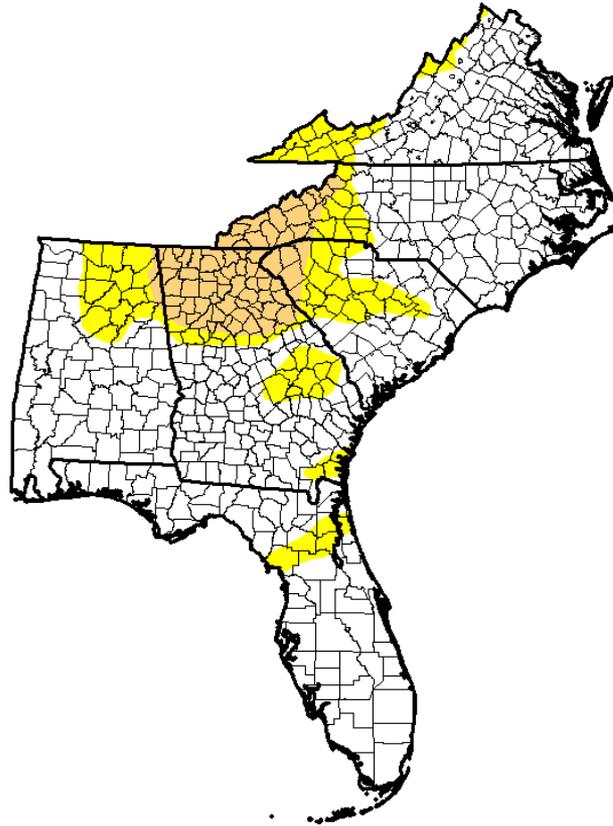

A higher peak each year

Source: Scripps CO₂ Program

CLIMATE CO₂ CENTRAL

Current drought status

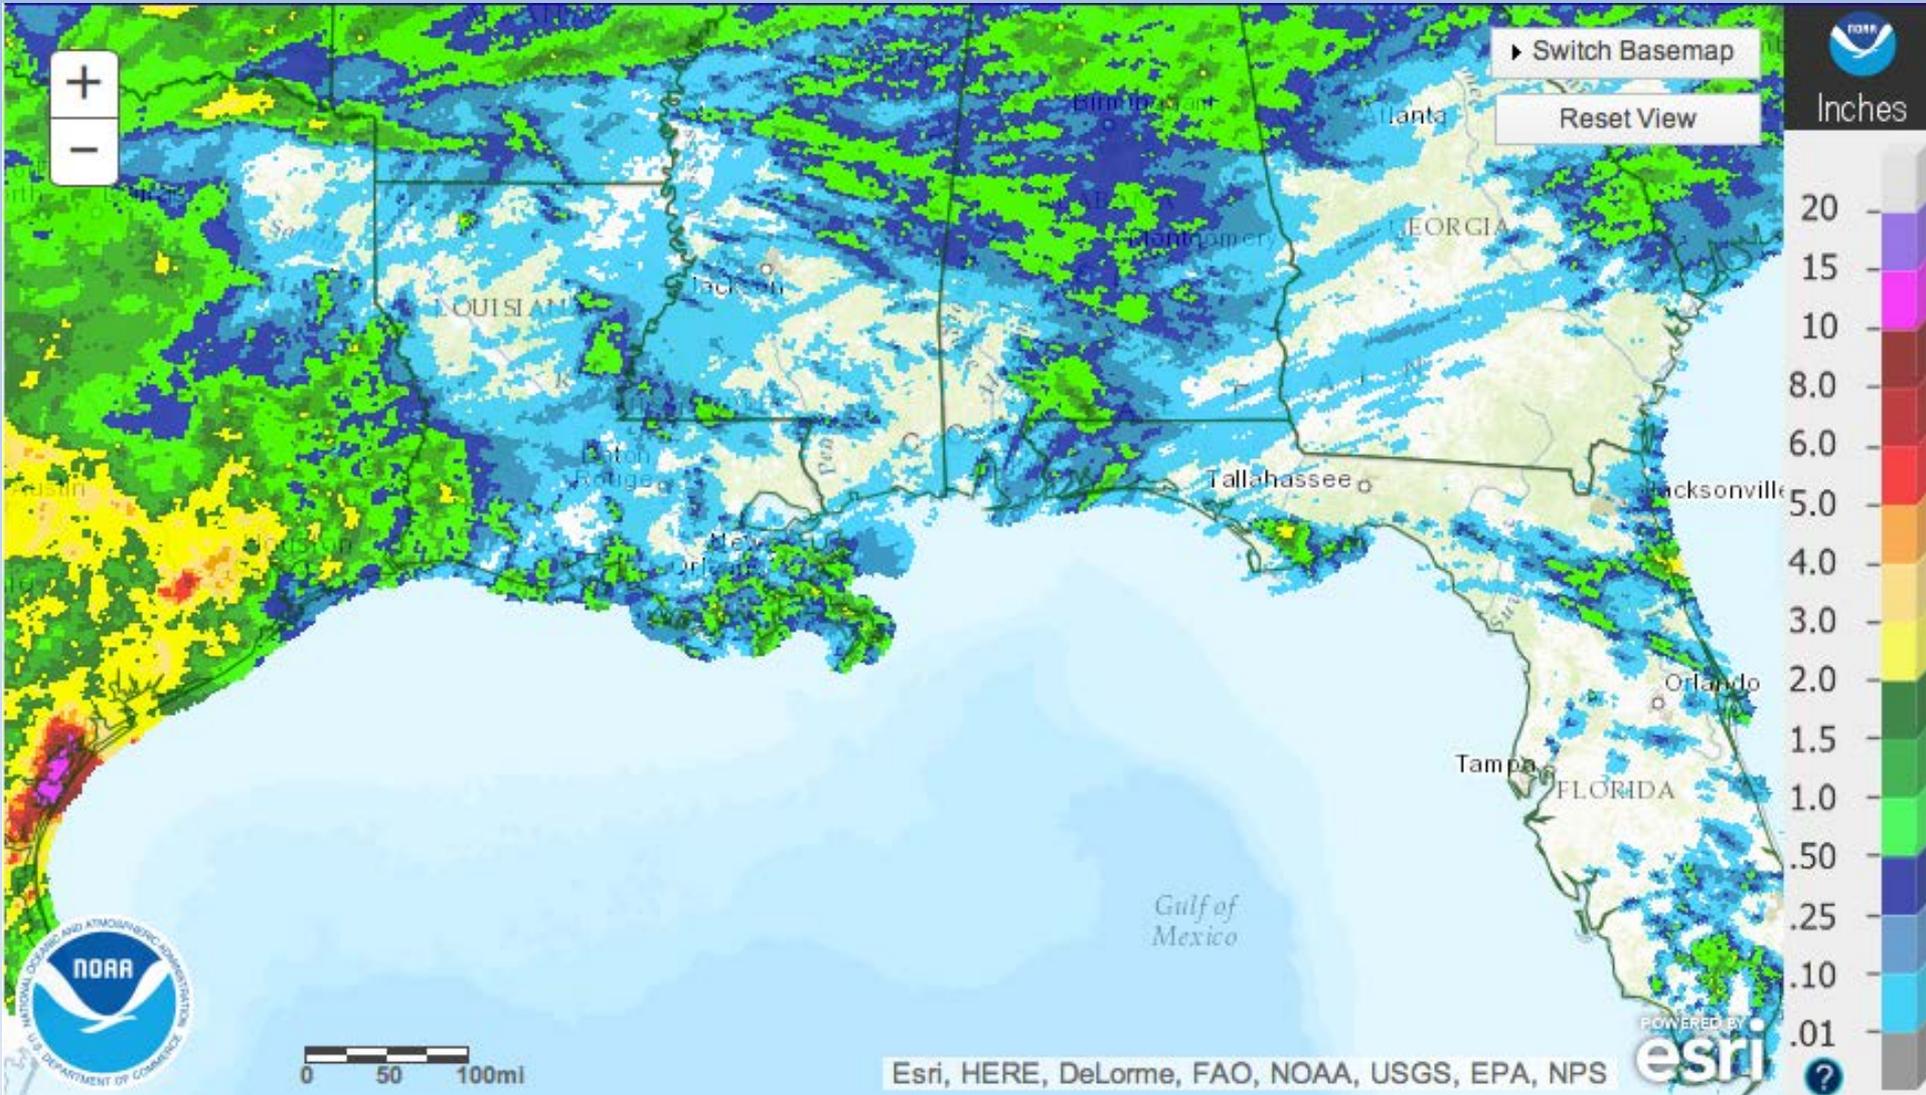

Intensity:

-  D0 - Abnormally Dry
-  D1 - Moderate Drought
-  D2 - Severe Drought

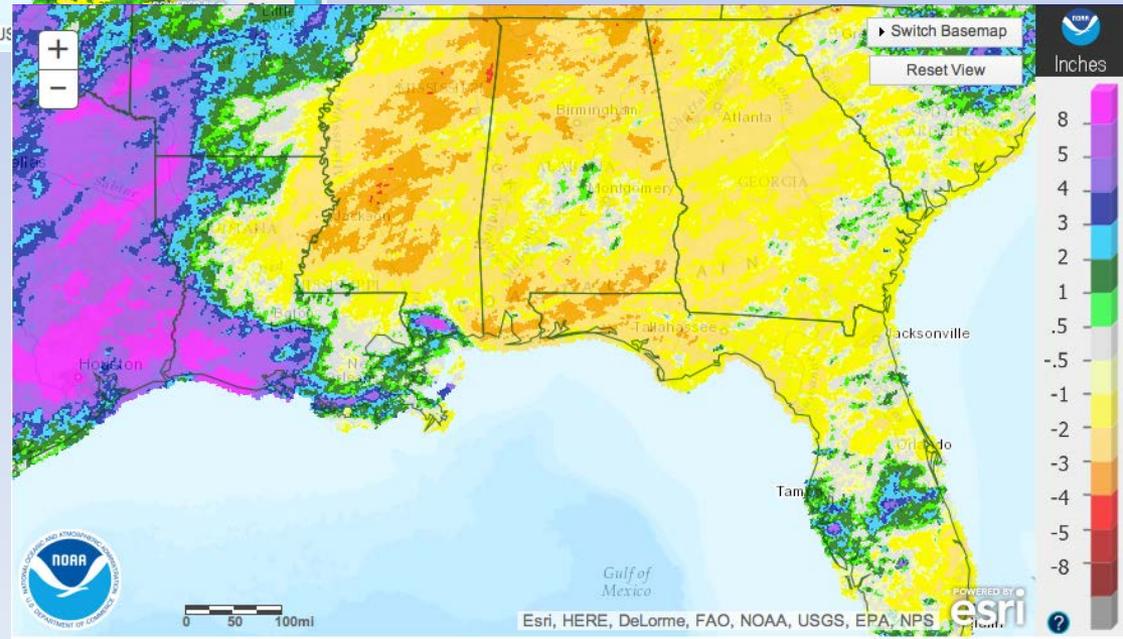

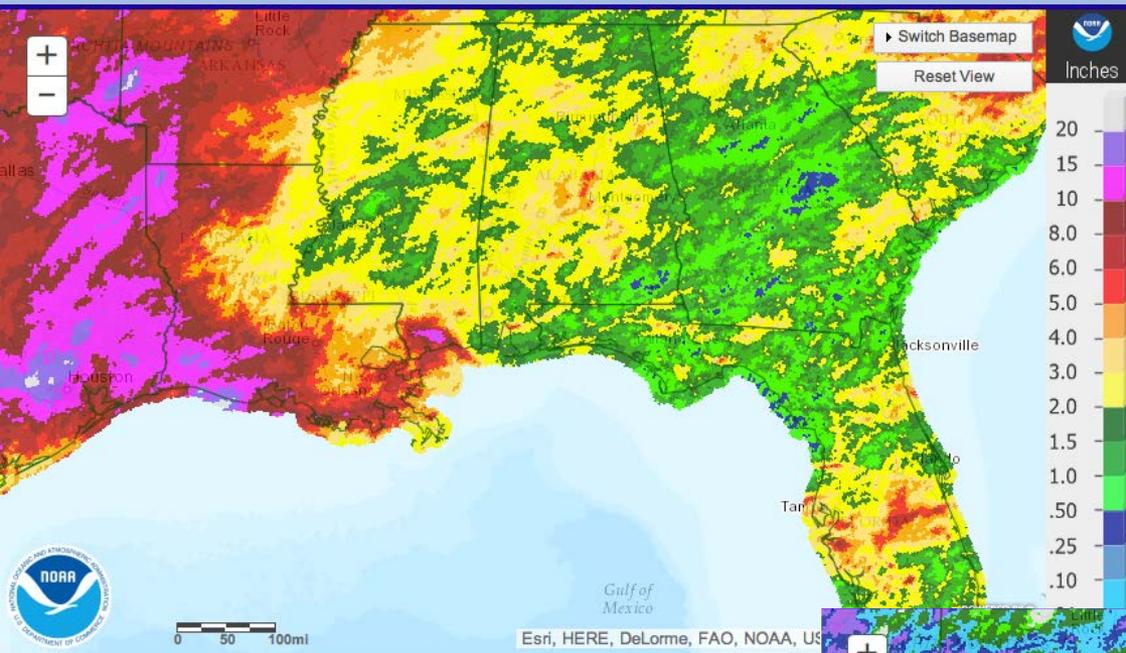

-  D3 - Extreme Drought
-  D4 - Exceptional Drought

The Drought Monitor focuses on broad-scale conditions. Local conditions may vary. See accompanying [text summary](#) for forecast statements.

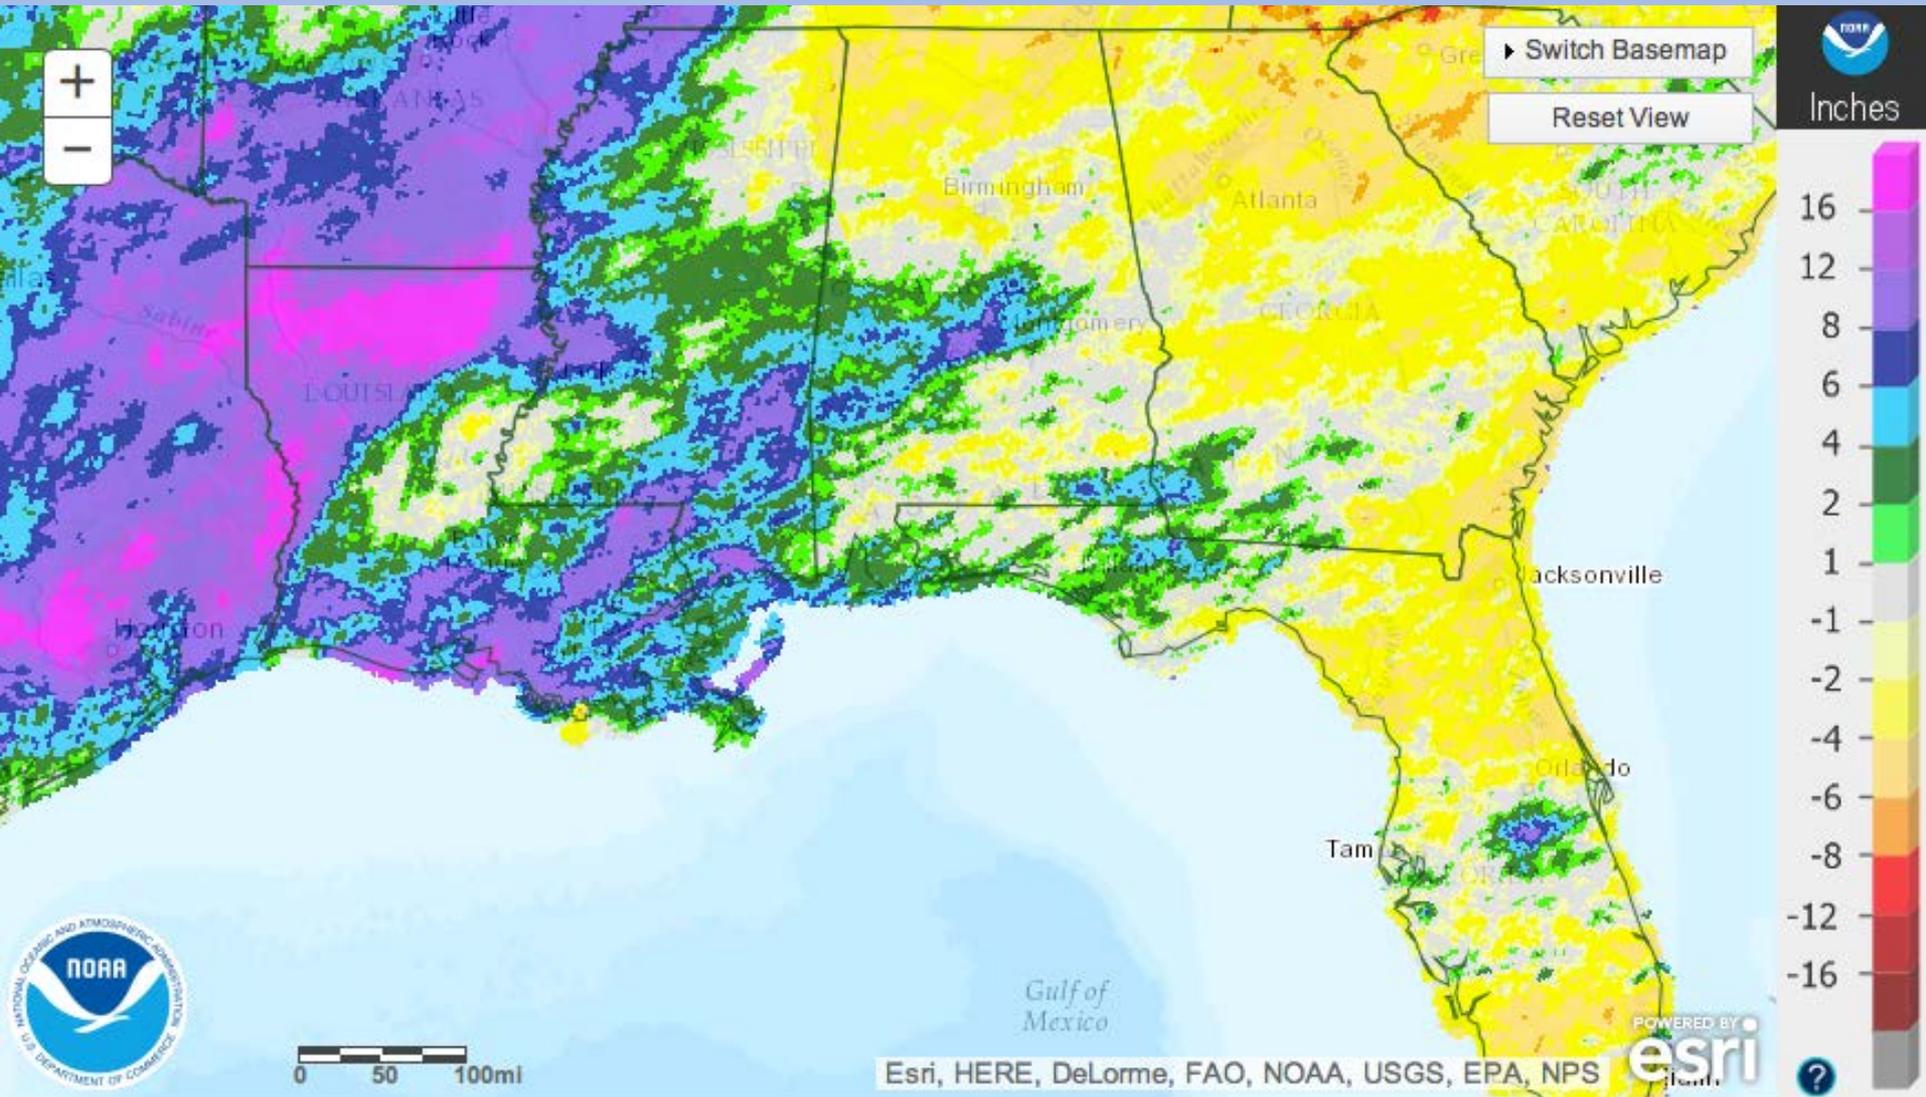

Rainfall – Last 7 Days

Rainfall – Last 30 Days

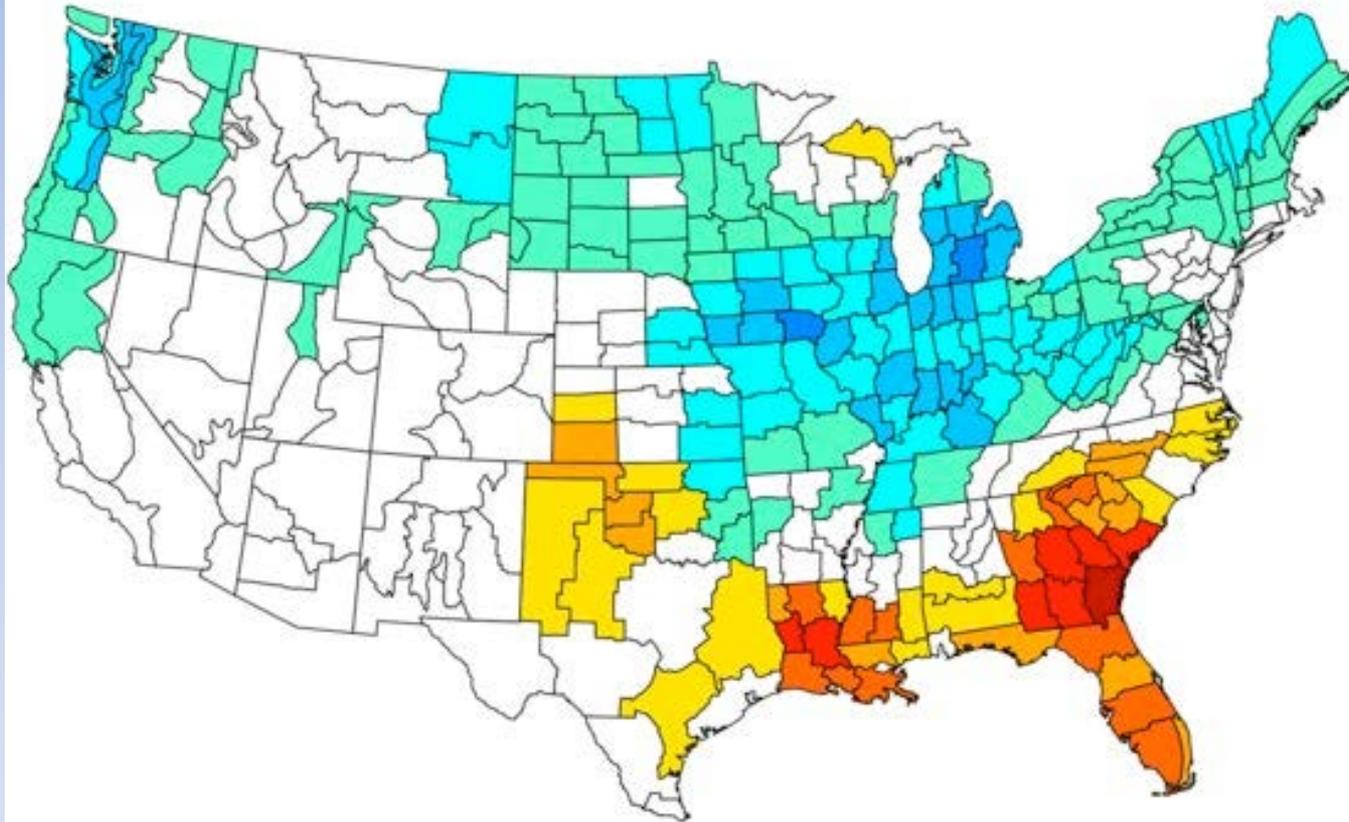

90-day Rainfall Departures

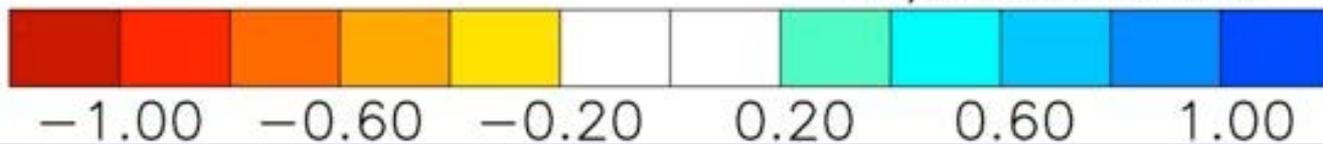

Changing May Rainfall Patterns

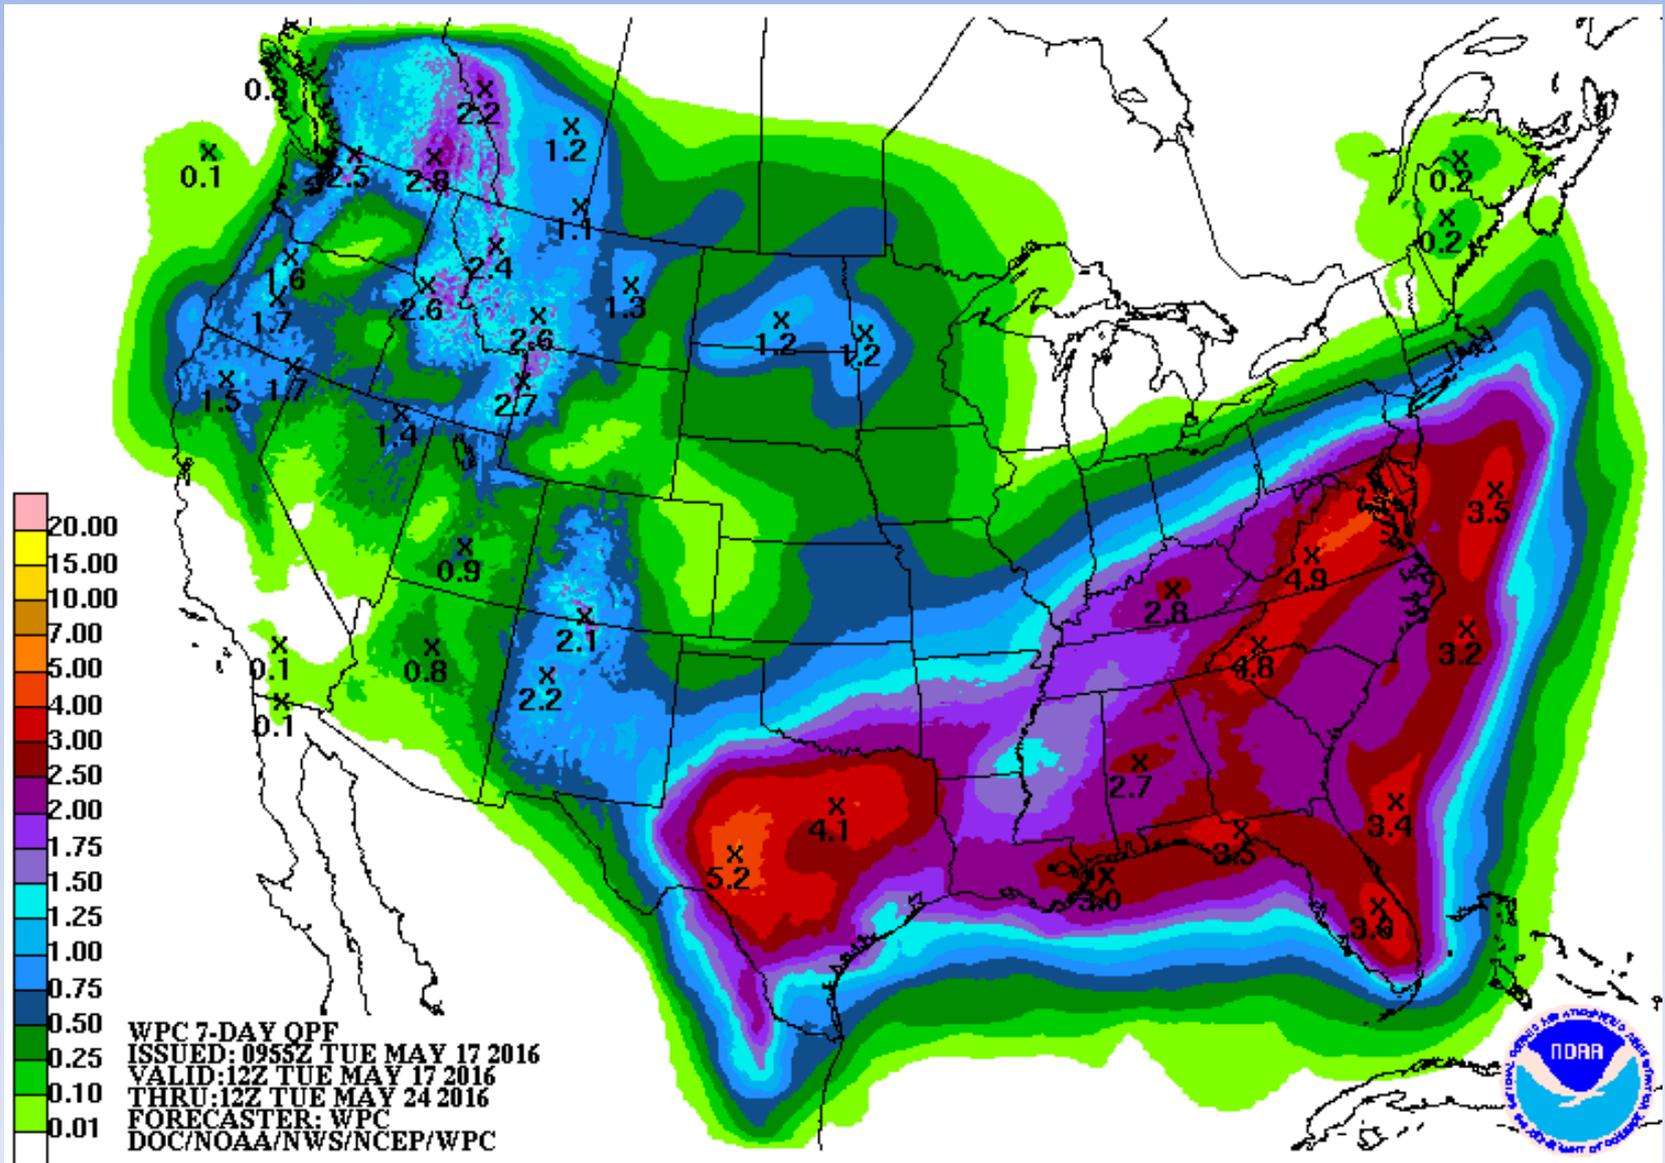

NOAA/NCDC Climate Division Composite Precipitation Anomalies (in)
May 1981 to 2015
Versus 1950–1995 Longterm Average

NOAA/ESRL PSD and CIRES-CU

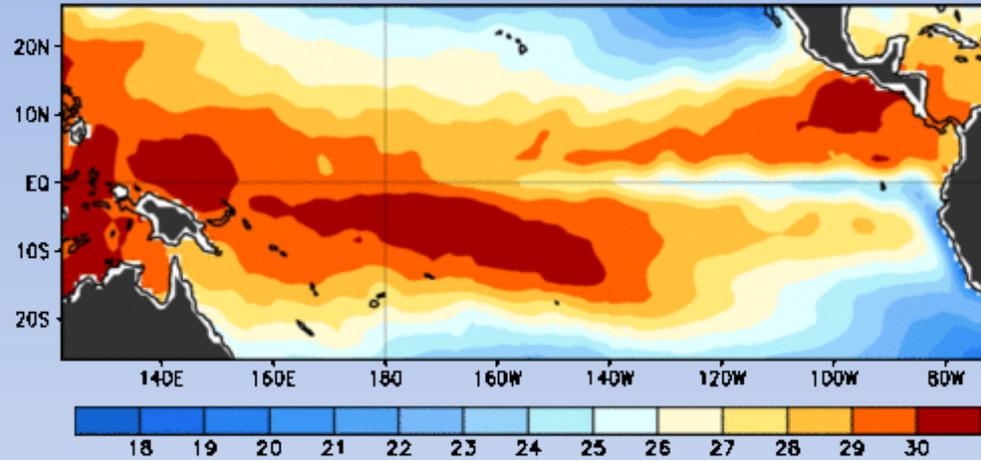

7-Day Precipitation Forecast

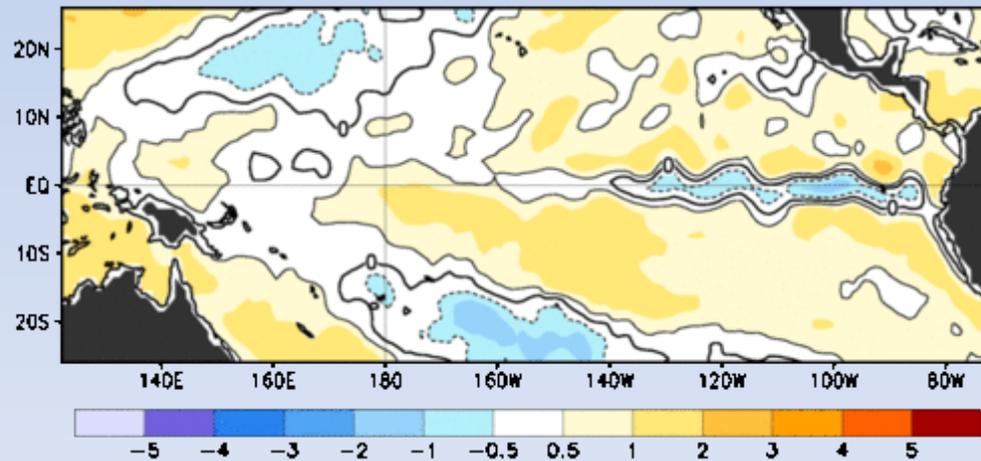

Current SST Anomalies

Observed Sea Surface Temperature (°C)

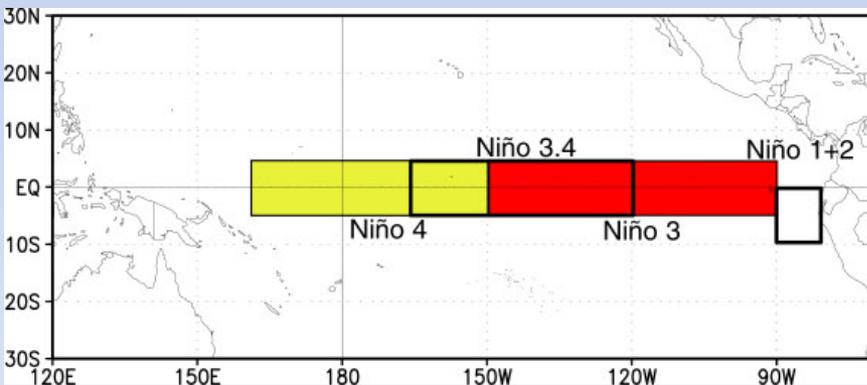

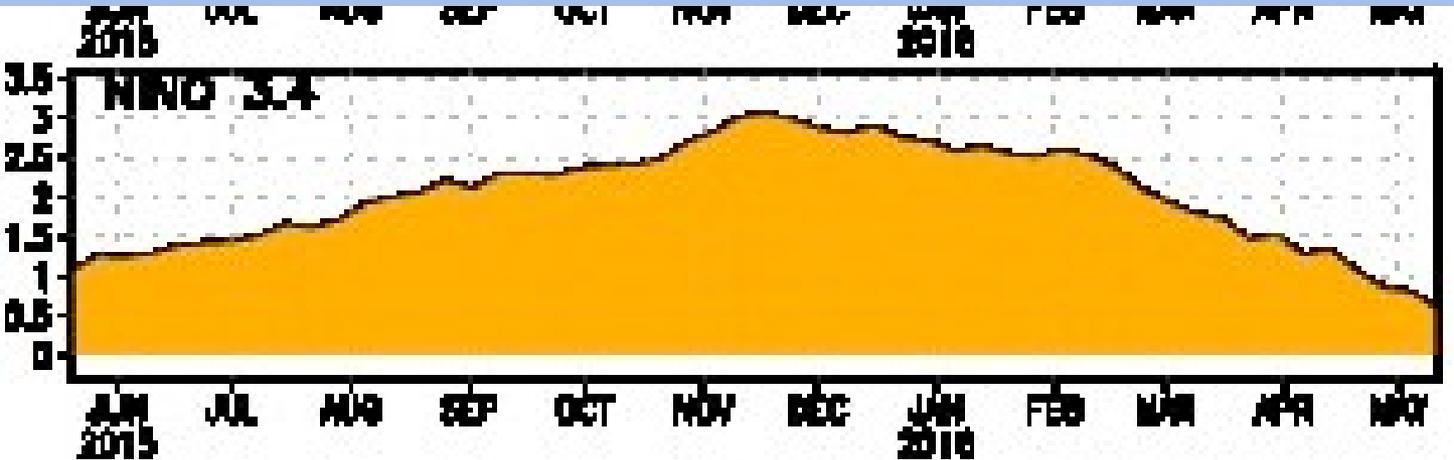

Observed Sea Surface Temperature Anomalies (°C)

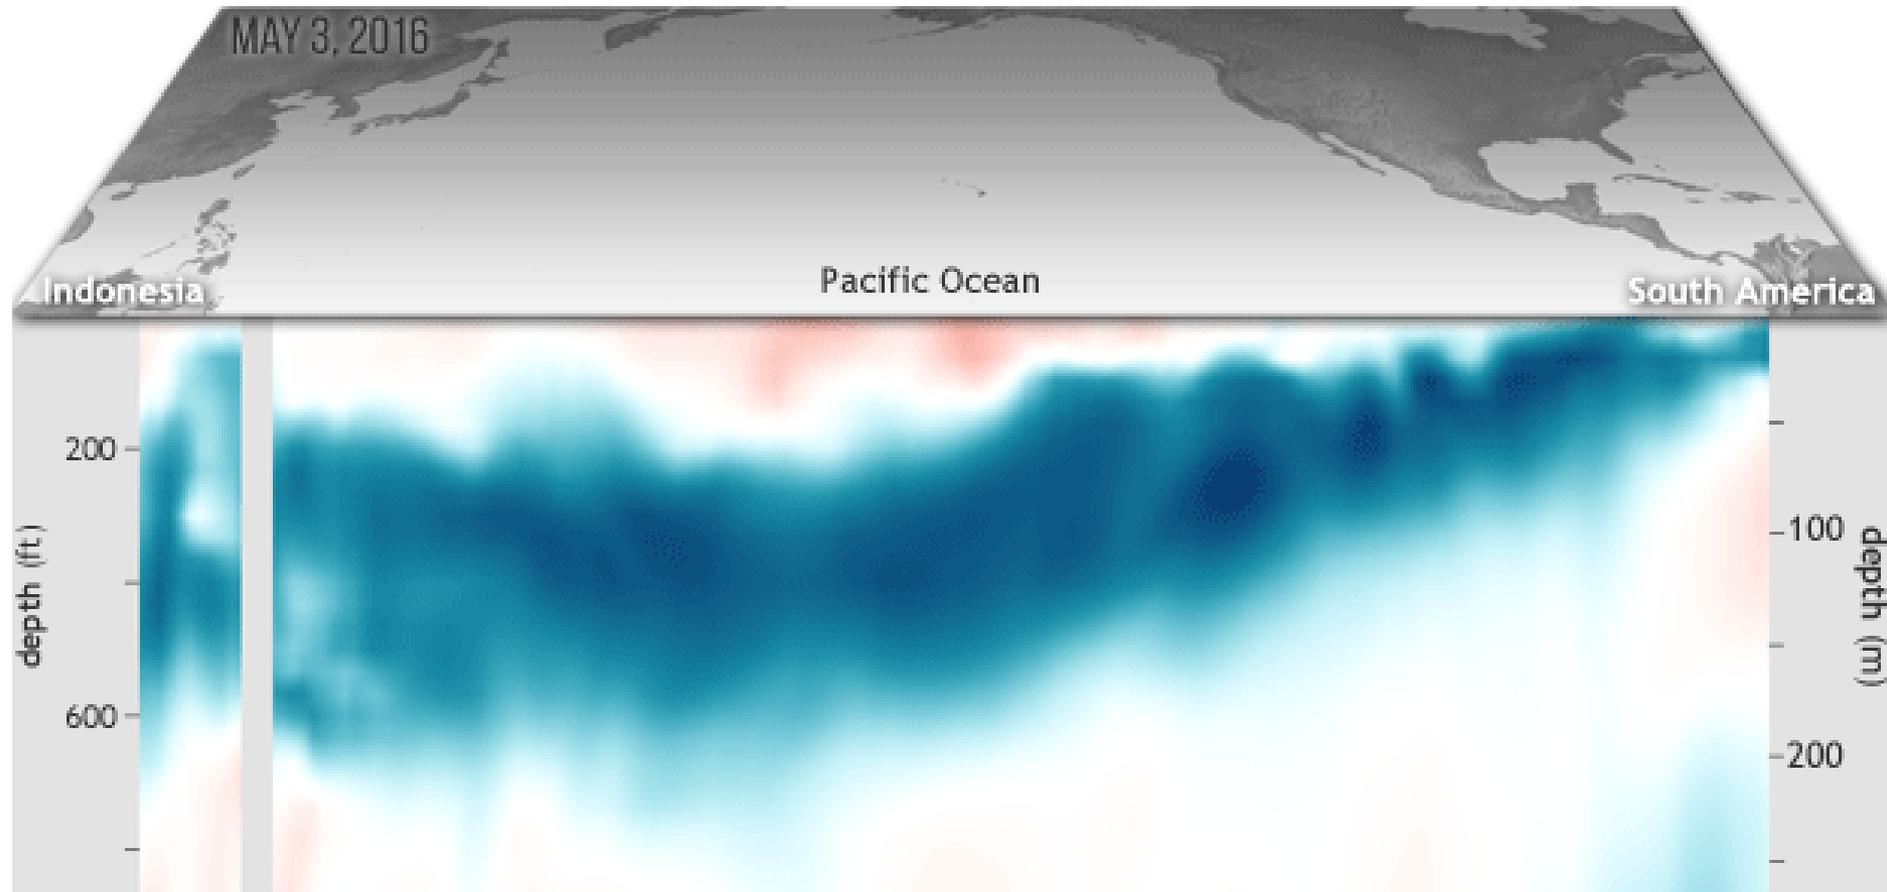

7-day Average Centered on 11 May 2016

El Nino on the decline

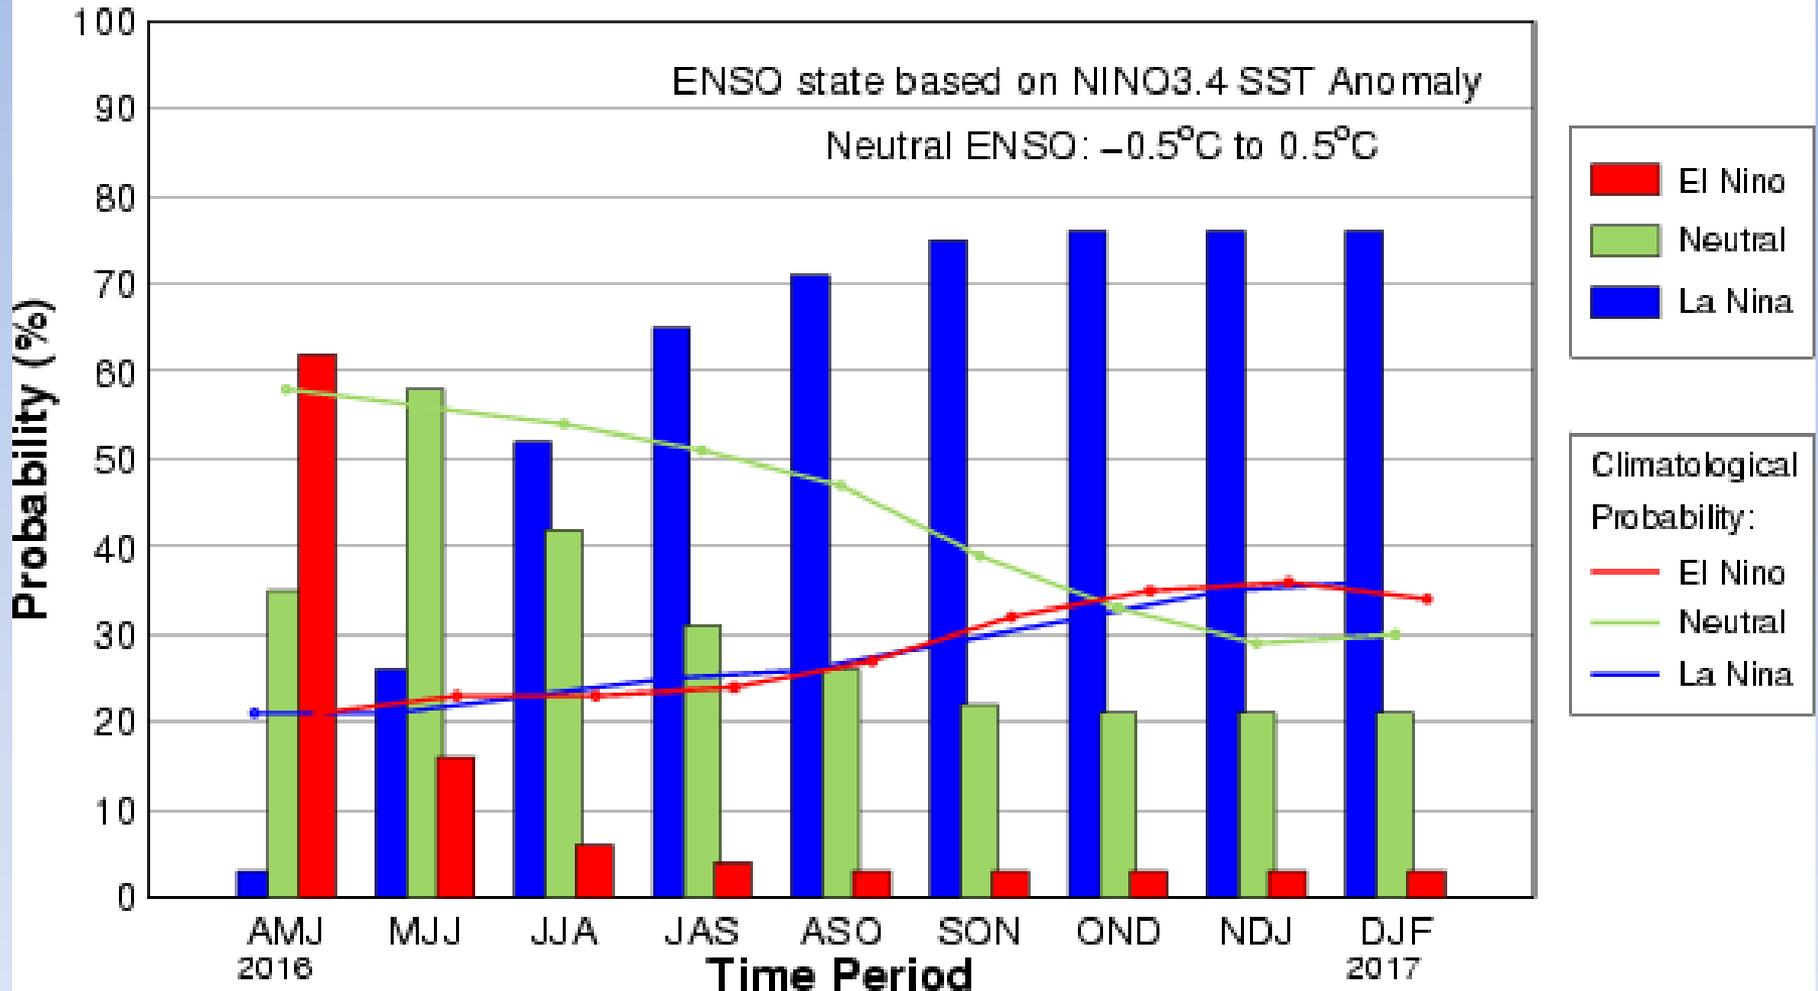

- Weekly Nino 3.4 index currently at +0.6
- Similar decline as 1998
- 1998 went negative (-0.6) by the first week of June

Subsurface Temperatures

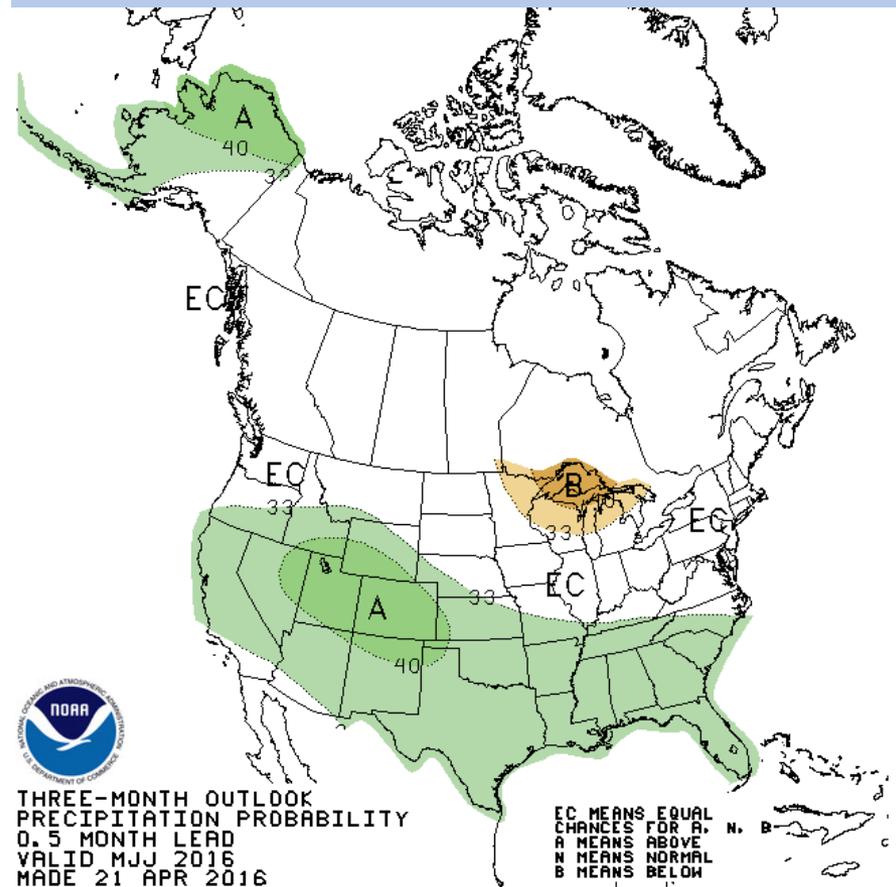

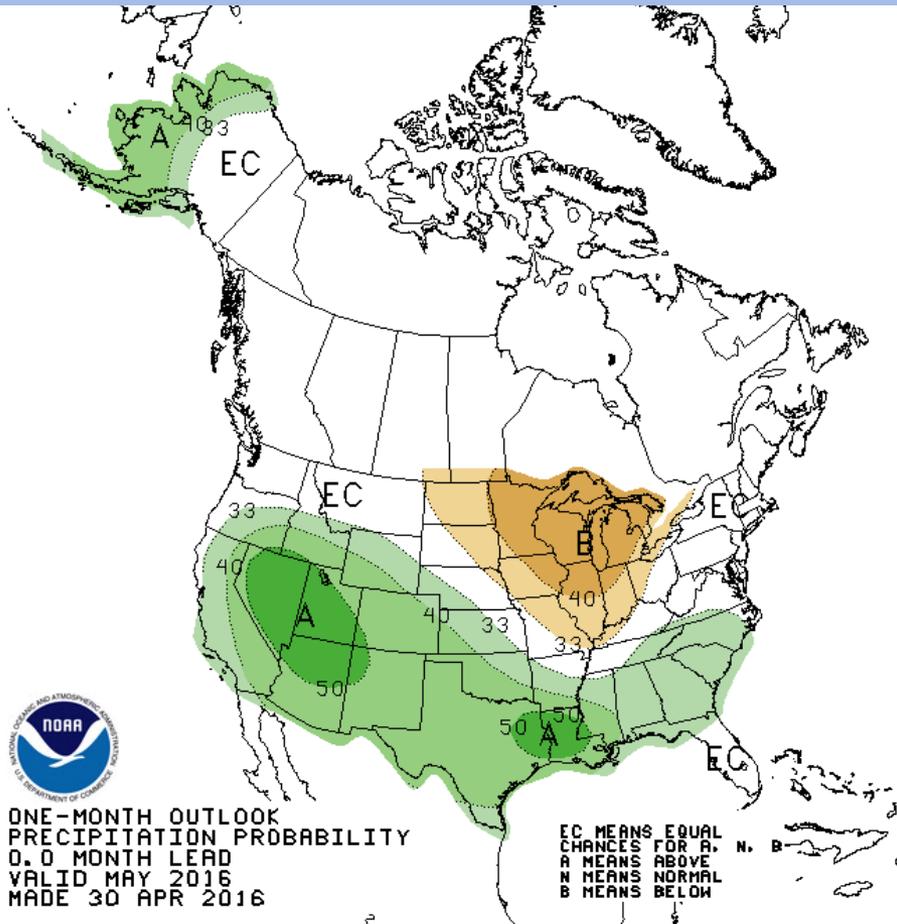

La Nina on the Way?

Early-May CPC/IRI Official Probabilistic ENSO Forecast

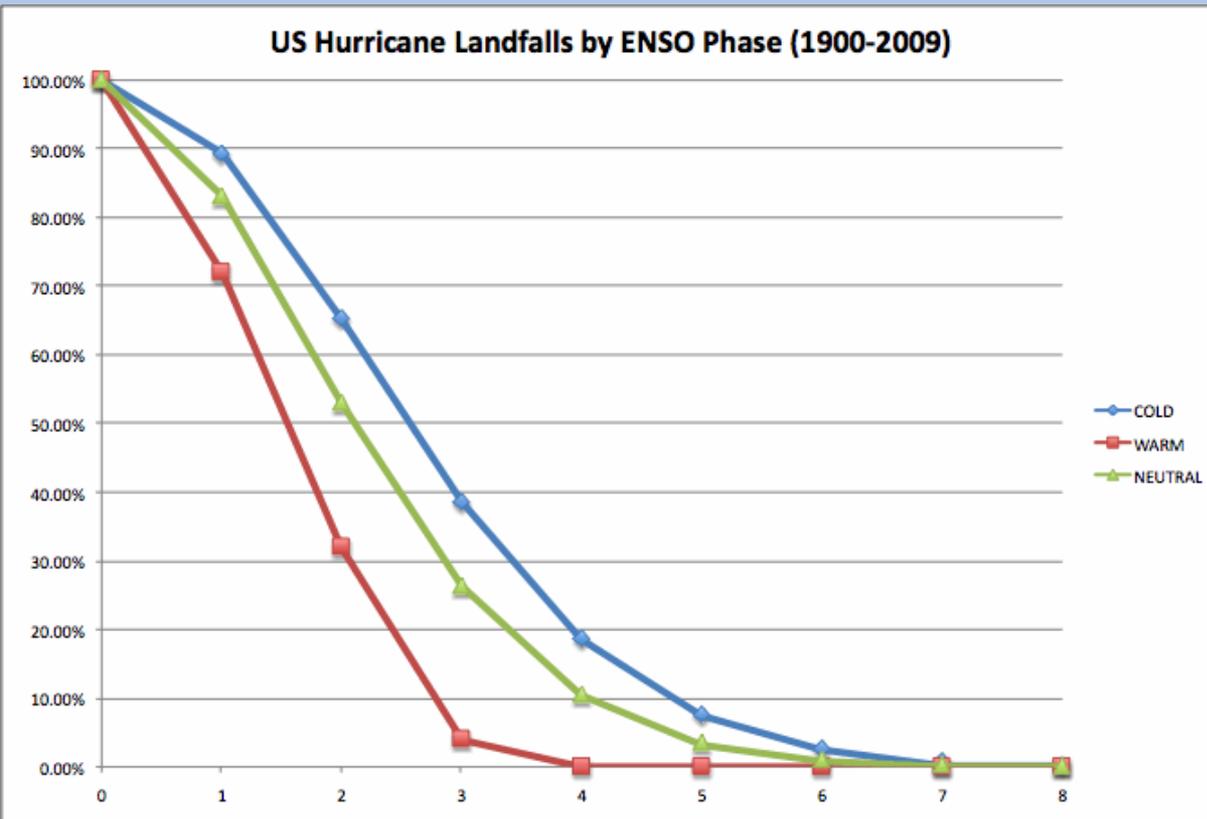

Official NOAA Outlook

One Month

Three-month

Hurricane Season Forecast

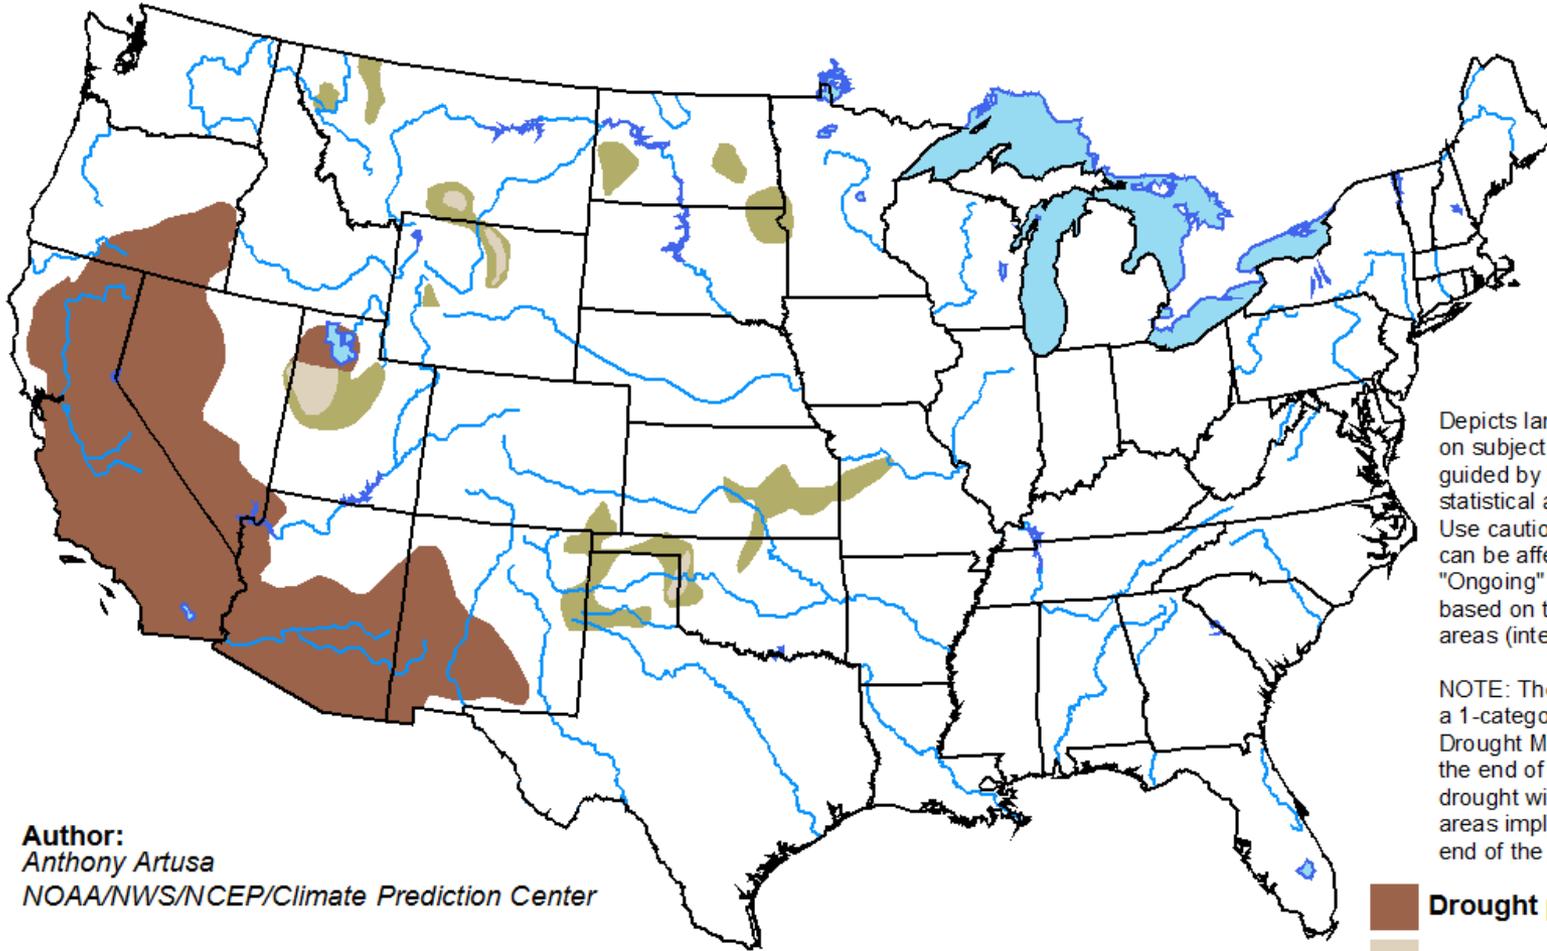

- CSU predicts 12 named storms, 5 hurricanes, and 2 major hurricanes
- NOAA forecast to be released May 27th
- 2 or more U.S. hurricane landfalls twice as likely during La Nina

U.S. Seasonal Drought Outlook

Drought Tendency During the Valid Period

Valid for April 21 - July 31, 2016
Released April 21, 2016

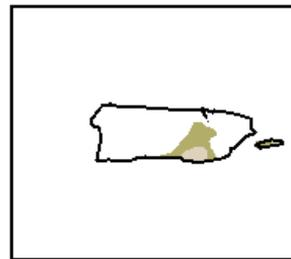

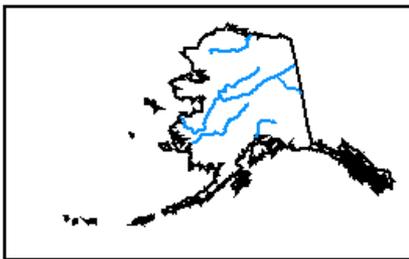

Depicts large-scale trends based on subjectively derived probabilities guided by short- and long-range statistical and dynamical forecasts. Use caution for applications that can be affected by short lived events. "Ongoing" drought areas are based on the U.S. Drought Monitor areas (intensities of D1 to D4).

NOTE: The tan areas imply at least a 1-category improvement in the Drought Monitor intensity levels by the end of the period, although drought will remain. The green areas imply drought removal by the end of the period (D0 or none).

Author:
Anthony Artusa
NOAA/NWS/NCEP/Climate Prediction Center

-  Drought persists
-  Drought remains but improves
-  Drought removal likely
-  Drought development likely

Streamflows and Groundwater

Realtime stream flow compared with historical monthly averages

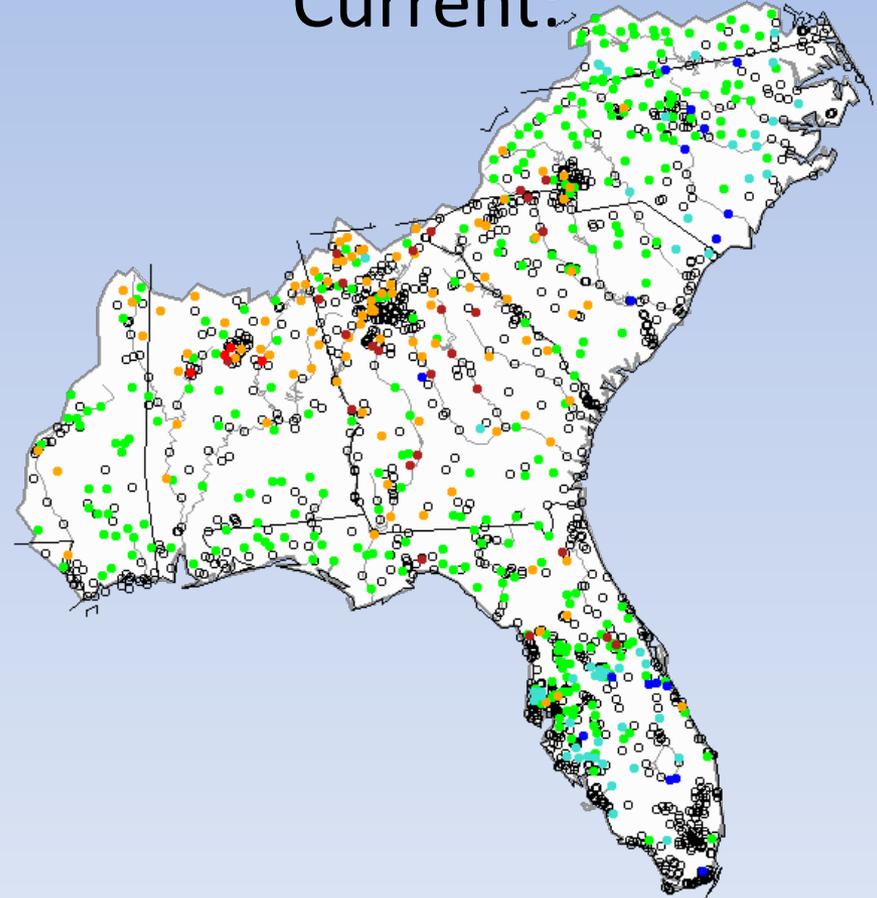

Monday, April 18, 2016 08:30ET

Previous Brief:

Monday, May 16, 2016 14:30ET

Current:

Explanation - Percentile classes						
Low	<10	10-24	25-75	76-90	>90	High
	Much below normal	Below normal	Normal	Above normal	Much above normal	

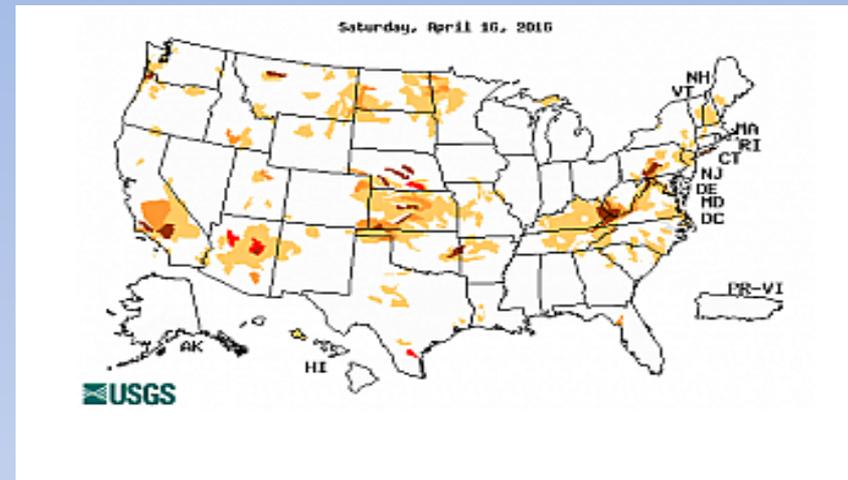

<http://waterwatch.usgs.gov>

Below Normal 7-day Average Streamflows

Previous brief:

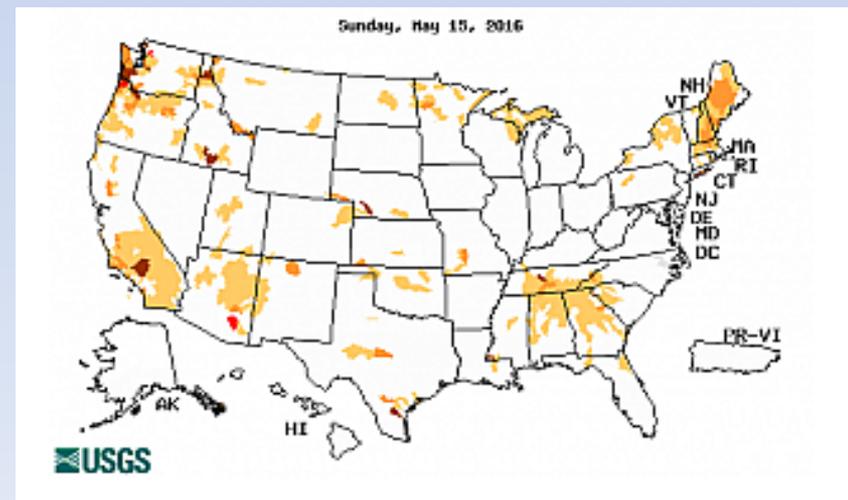

Below normal 7-day average streamflow as compared with historical streamflow for day shown

Explanation - Percentile classes				
Low	≤ 5	6-9	10-24	Near or above normal
Extreme hydrologic drought	Severe hydrologic drought	Moderate hydrologic drought	Below normal	

Current:

<http://waterwatch.usgs.gov>

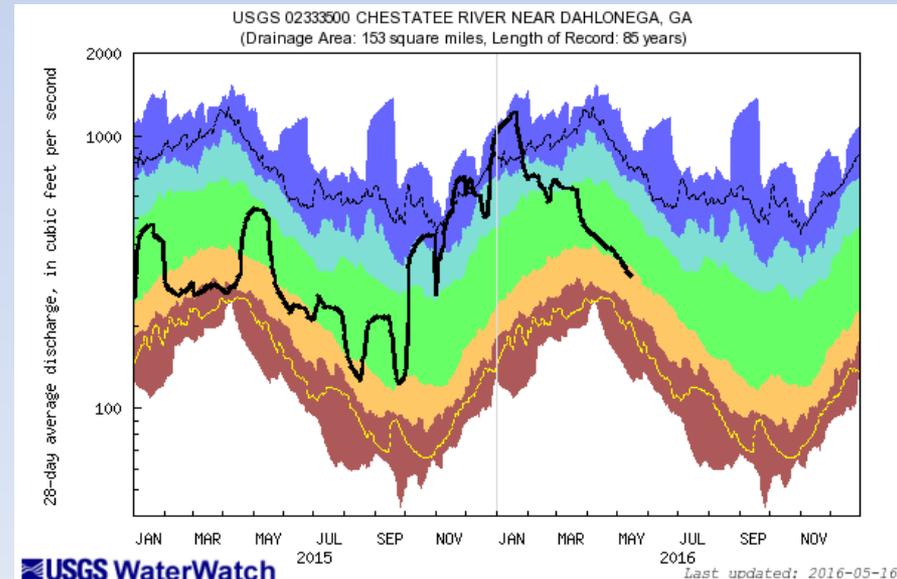

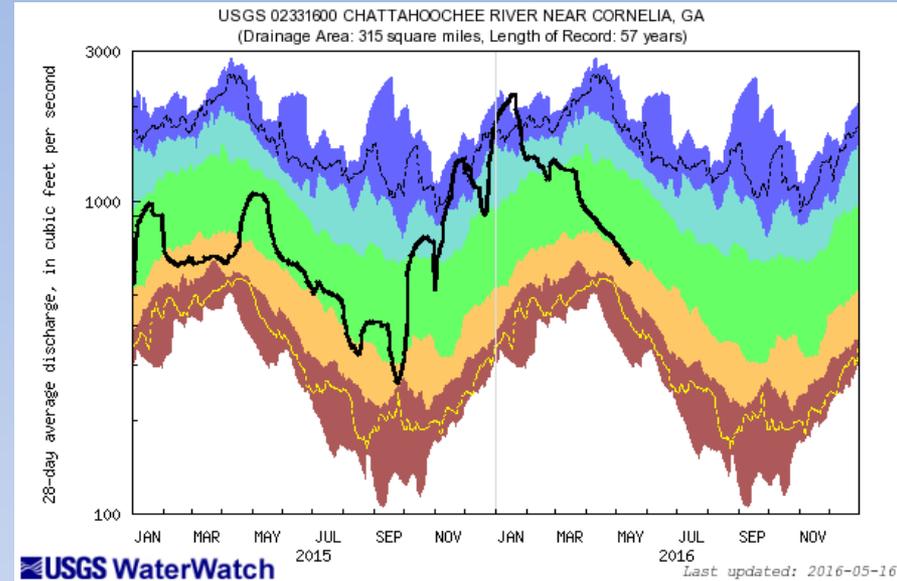

Lake Lanier Inflows

Chattahoochee near
Cornelia (02331600)

<http://waterwatch.usgs.gov>

Chestatee near
Dahlonega (02333500)

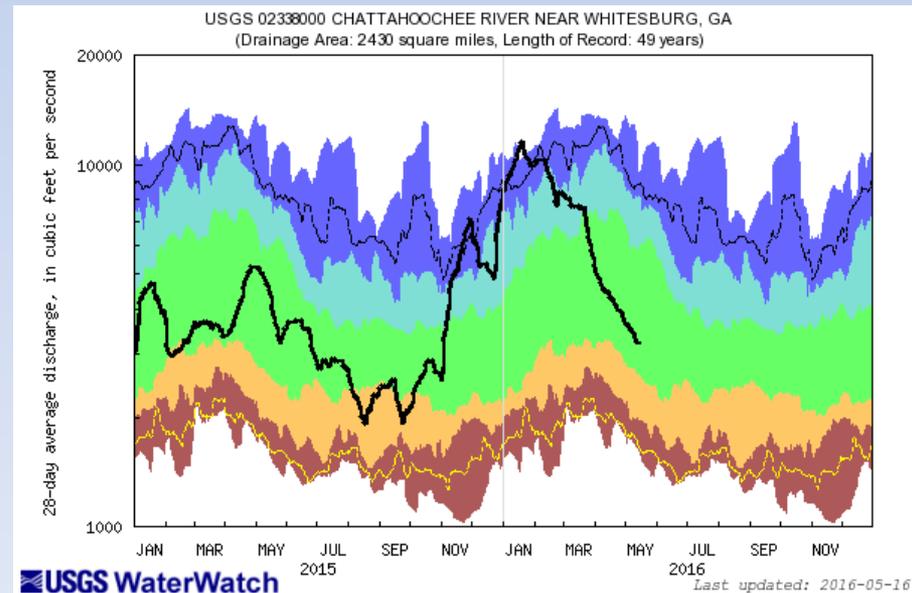

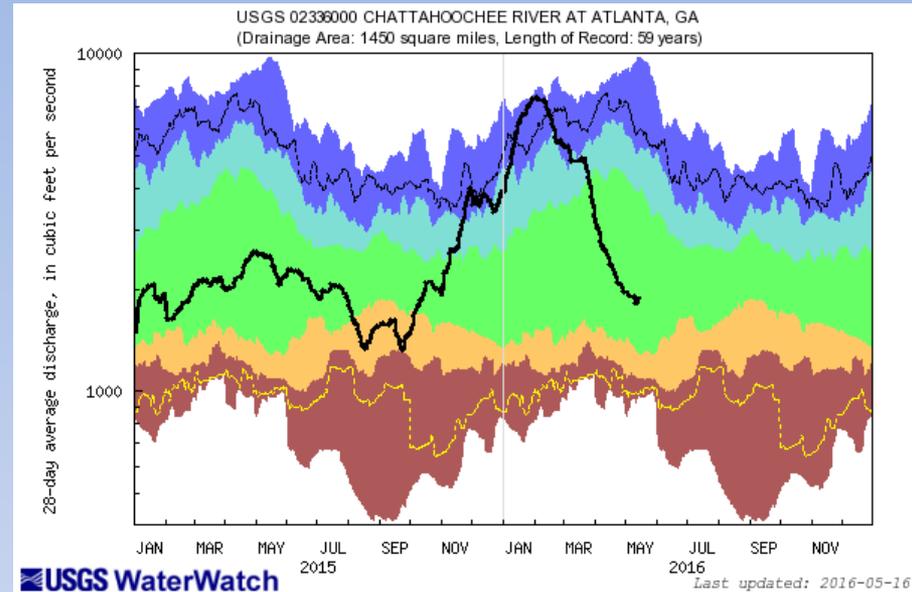

Explanation - Percentile classes						Flow
lowest-10th percentile	5	10-24	25-75	76-90	95	
Much below Normal	Below normal	Normal	Above normal	Much above-normal		

Current Streamflows

Chattahoochee at Atlanta (02336000)

<http://waterwatch.usgs.gov>

Chattahoochee near Whitesburg (02338000)

Explanation - Percentile classes						Flow
lowest-10th percentile	5	10-24	25-75	76-90	95	
Much below Normal		Below normal	Normal	Above normal	Much above-normal	

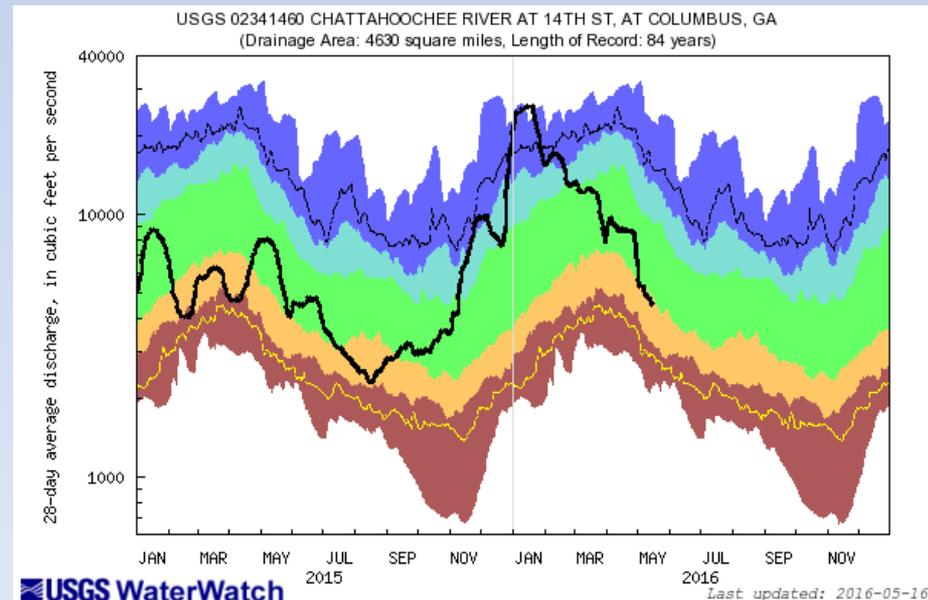

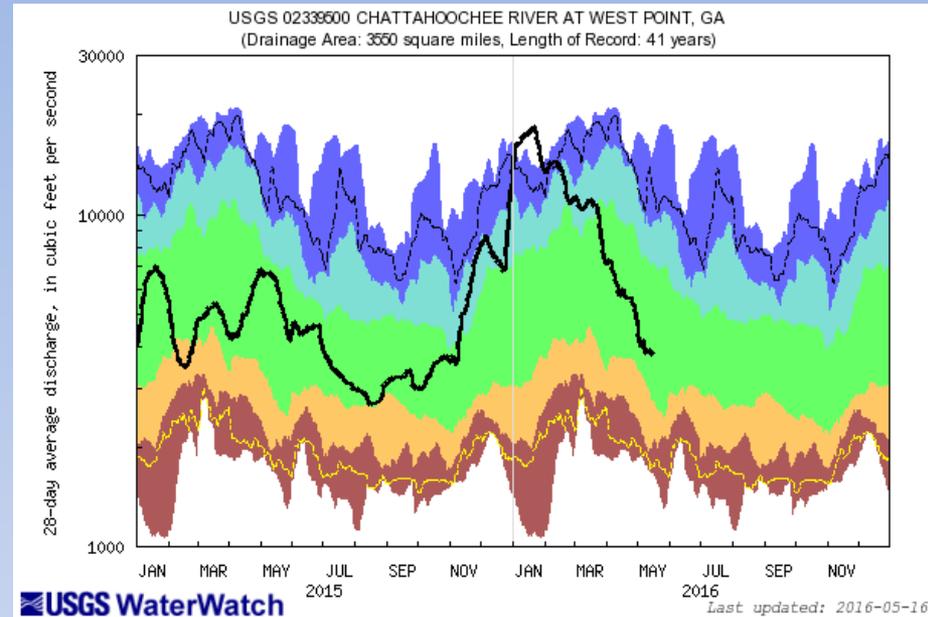

Current Streamflows

Chattahoochee at West Point (02339500)

<http://waterwatch.usgs.gov>

Chattahoochee at Columbus(02341460)

Explanation - Percentile classes						Flow
lowest-10th percentile	5	10-24	25-75	76-90	95	
Much below Normal	Below normal	Normal	Above normal	Much above-normal		

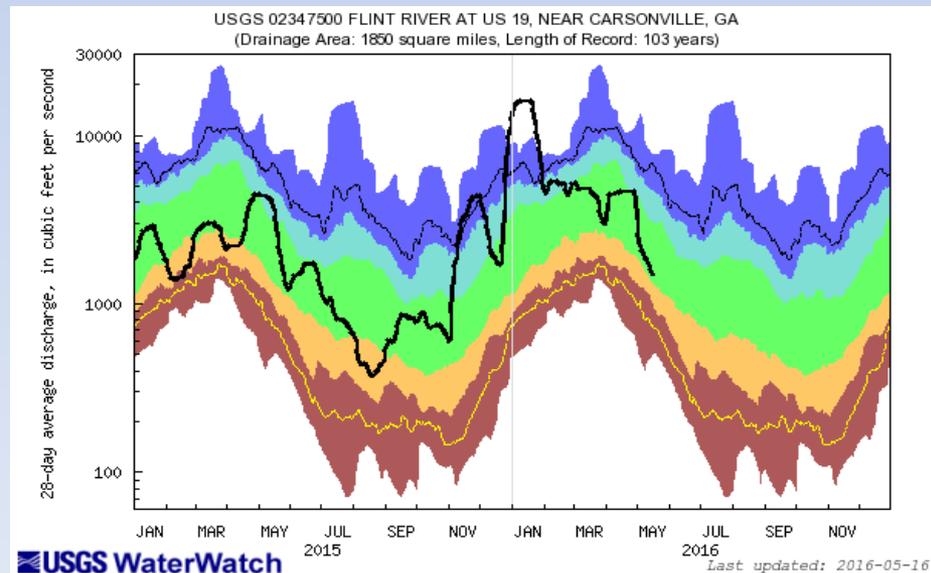

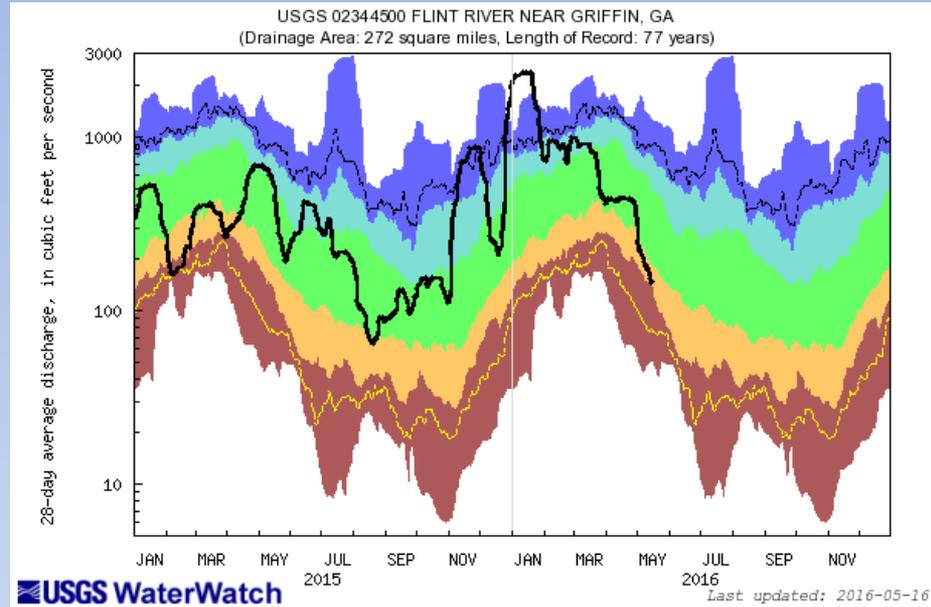

Current Streamflows

Flint River near Griffin (02344500)

<http://waterwatch.usgs.gov>

Flint River near Carsonville (02347500)

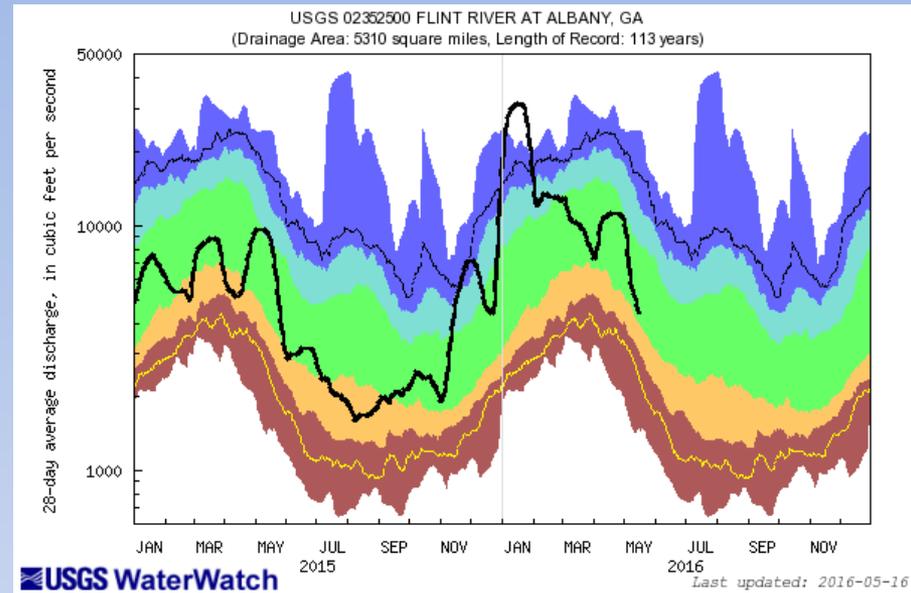

Explanation - Percentile classes						Flow
lowest-10th percentile	5	10-24	25-75	76-90	95	
Much below Normal	Below normal	Normal	Above normal	Much above-normal		

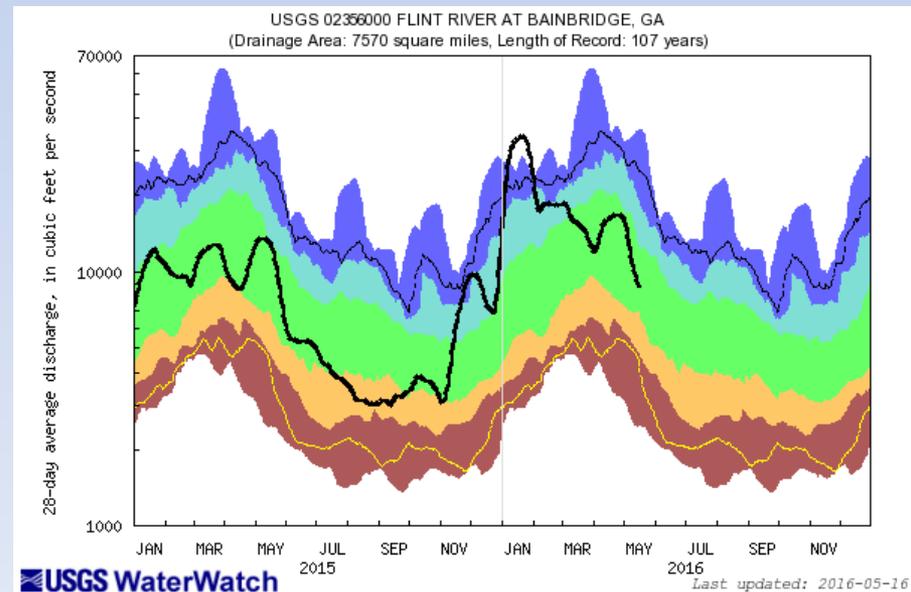

Current Streamflows

Flint River at Albany (02352500)

<http://waterwatch.usgs.gov>

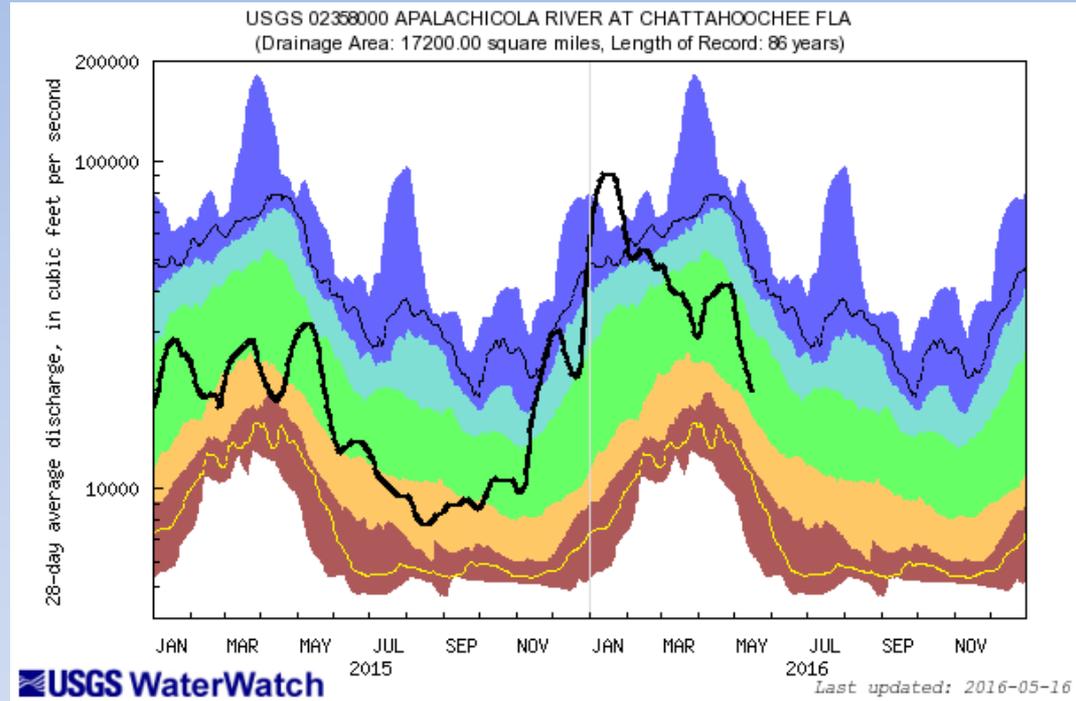

Flint at Bainbridge (02356000)

Explanation - Percentile classes						Flow
lowest-10th percentile	5	10-24	25-75	76-90	95	
Much below Normal		Below normal	Normal	Above normal	Much above-normal	

Streamflows

Apalachicola at Chattahoochee (02358000)

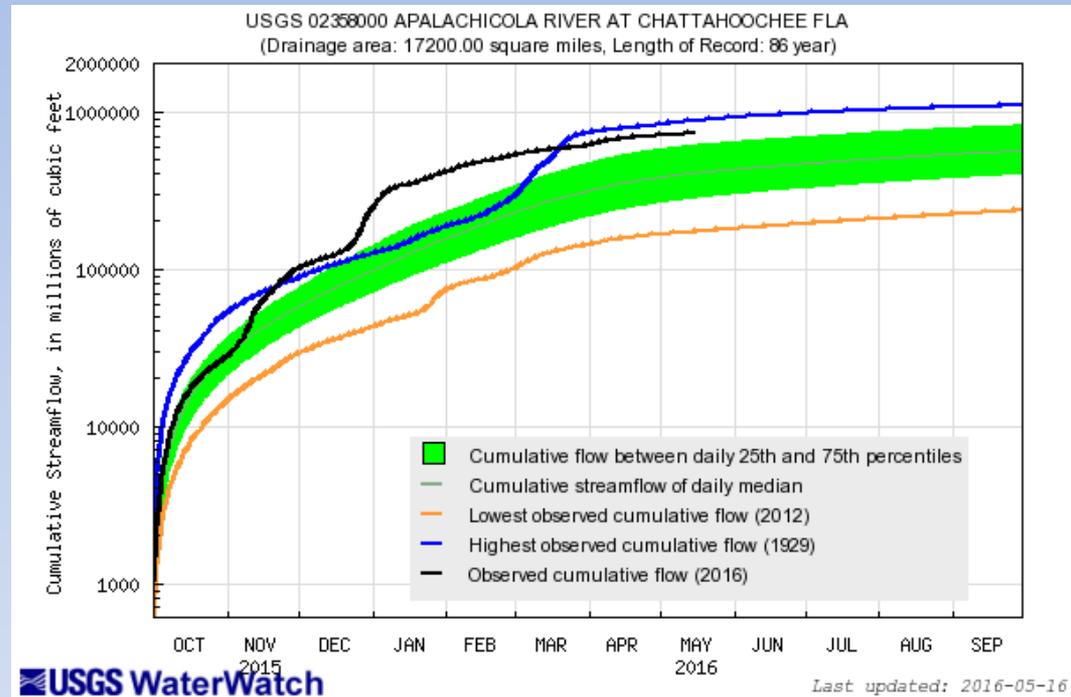

<http://waterwatch.usgs.gov>

Explanation - Percentile classes						
lowest-10th percentile	5	10-24	25-75	76-90	95	90th percentile highest
Much below Normal	Below normal	Normal	Above normal	Much above normal		Flow

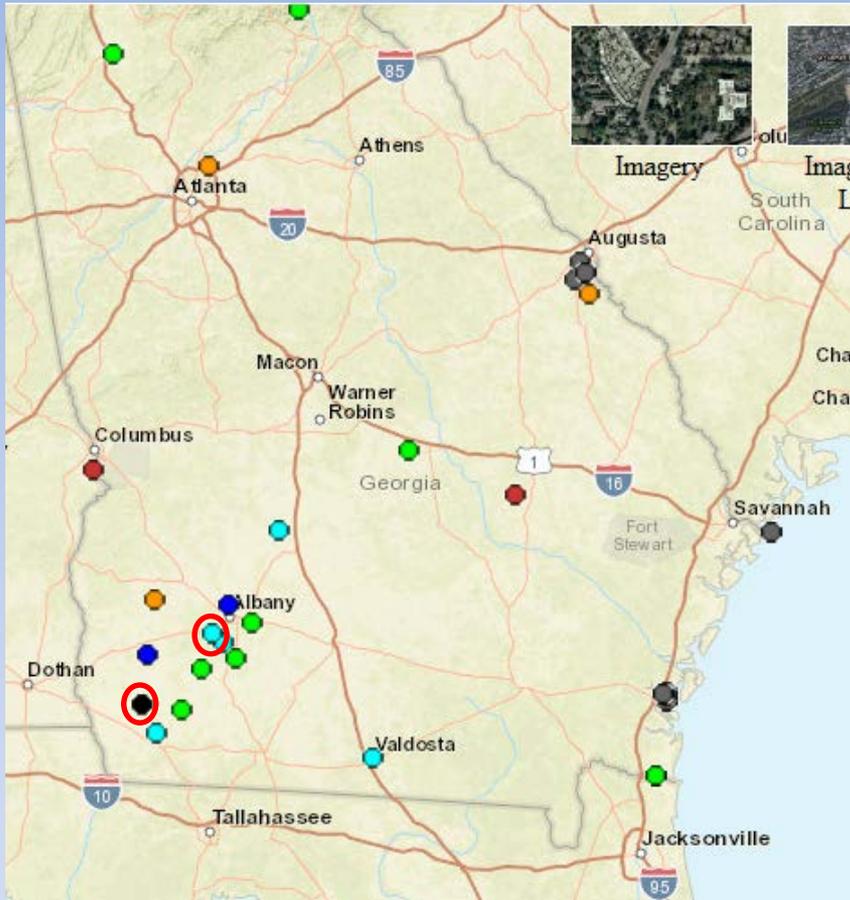

Streamflows

Apalachicola at Chattahoochee (02358000)

Streamflow Forecasts

1-Month Mean Daily Streamflow Forecasts Apalachicola Watershed Southeast River Forecast Center

May 16th – June 16th 2016

-  Above Normal
-  Near Normal
-  Below Normal

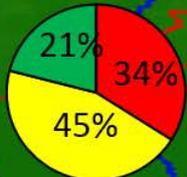

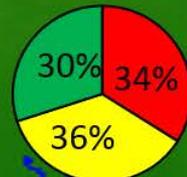

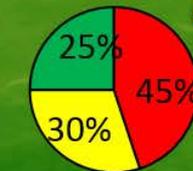

3-Month Mean Daily Streamflow Forecasts

Apalachicola Watershed

Southeast River Forecast Center

May 16th – August 16th
2016

-  Above Normal
-  Near Normal
-  Below Normal

Summary – David Zierden

- CO₂ concentrations are likely above 400 ppm for generations or longer
- Moderate drought has developed over N. Georgia and the upper ACF
- Recent pattern brought excess rain to Texas, Louisiana, but left the ACF relatively dry
- Pattern shift bringing unsettled weather to the Southeast this week
- El Nino continues to decline, shift to La Nina likely (75%)
- NOAA forecasting increased chances of above normal rainfall the next 1-3 months
- La Nina likely to enhance tropical activity this upcoming season

Summary-Tony Gotvald

- Realtime streamflows are in the much below normal to normal range for most of the ACF basin.
- 28-day average streamflows into Lake Lanier are in the below normal range.
- 28-day average streamflows for the Flint River are in the below normal to normal range.
- Groundwater levels are in the much above normal to normal range in Southwest Georgia.

Summary – Jeff Dobur

- 1 Month Streamflow forecast - Near Normal
- 3 Month Streamflow forecast – ESP indicates equal chances. Favor near Normal.
- Pie Charts do not directly include any adjustments to the ESP forecast based on ENSO, CPC or other. Based on soil conditions relative to normal in concert with historical precipitation.
